Professional Experience

Threat Intelligence Research Intern (Automation Specialist),

06/2025 – 01/2026

Soluciones en Tecnología y Ciberseguridad S.A de C.V

- Performed detailed analysis of web protection mechanisms, including Cloudflare and anti-bot systems, and successfully circumvented 5 out of 7 of these to improve the effectiveness of security research projects.
- Conducted open-source investigations and research using cyber intelligence tools to gather and analyze data, leading to actionable insights and enhanced data correlation.
- Designed and deployed Python automation scripts, enhancing data correlation and collection capabilities and reducing manual investigation time by 80%.

Technical English Instructor, Academia de Ciberseguridad

10/2024 – 04/2025

- Delivered and tailored a 16-week English course for over 50 IT professionals, focusing on technical terminology and documentation related to cybersecurity and information technology, improving comprehension of cybersecurity terms by 30%.
- Provided technical assistance to over 50 students in Moodle, Canvas and Teams, including troubleshooting system configurations and resolving 98% of access issues.

Projects

API Database Communication 🔗, Microsoft SQL Server, Server Management Studio, Postman

- Led the end-to-end validation of API-to-database communications, utilizing Postman to perform **regression testing and ensure data security**.
- Established standardized integration procedures between Visual Studio and Microsoft SQL Server to identify and mitigate backend latency issues.

Data Input and Retrieval RAG system 🔗, n8n Qdrant (Embeddings)

- **Oversaw** the quality assurance framework for a Retrieval-Augmented Generation (RAG) system, maintaining a **rigorous 89% accuracy benchmark** through systematic testing of PDF data extraction.
- Streamlined information workflows by automating the intake and retrieval of complex technical documentation, reducing the time required for internal data audits.

Automatic Product Reviews Tagging 🔗, n8n

- Engineered an automated sentiment analysis and classification workflow using n8n, eliminating manual data entry and achieving **100% classification accuracy**.
- Optimized feedback loops by implementing real-time tagging protocols, allowing for immediate operational response to customer trends.

Education

Specialization in Web3 Development & Smart Contract Security, Blockchain Accelerator

B.S in Computer Systems Engineering (IoT Concentration), Virtual University of the State of Guanajuato

- **IoT Concentration:** IoT, Electronics, Programming Systems, Embedded Software, Communication & Interfaces, IoT Programming.

B.M in Music, Autonomous University of Baja California

- Concentration in Piano Performance

Certifications

CompTIA Security+ 🔗
April 14th, 2025

CompTIA Network+ 🔗
September 12th, 2025

CompTIA CySA+
June 4th, 2026 (Expected)
